

Thin-film solar roof tiles

Overview

What is HanTile solar roof?

Based on Hanergy's MiaSolé high efficiency Thin Film cells, the Hantile is the ultimate roof application of thin film. Finally all visible surface of a curved solar roof tile can be efficiently used, making it possible to get maximum yield of a tile roof. Under all circumstances.

What is thin-film solar technology?

Thin-film solar technology represents a departure from traditional silicon-based solar panels. Instead of using thick layers of crystalline silicon, thin-film solar cells are made by depositing one or more thin layers of photovoltaic material onto a substrate.

Are thin-film solar panels a good choice?

Flexibility: Unlike rigid silicon panels, many thin-film solar cells can be made flexible. This allows for integration into curved surfaces, portable devices, and even clothing. **Lightweight:** The thinness of these solar cells makes them much lighter than traditional panels.

What are the different types of thin-film solar cells?

Cadmium Telluride (CdTe): Currently the most common type of thin-film solar cell in commercial use. CdTe cells offer a good balance of cost and efficiency, making them competitive with traditional silicon cells in certain applications.
