

# **Turbine Energy Storage solar Power Station**

## Overview

---

How does a solar energy storage power station work?

The solar thermal energy storage power station can generate electricity with or without direct sunlight, thanks to the heliostats and the molten salt, while achieving stable all-day power output. Two adjacent heat-absorbing towers, sharing one turbine generator, are settled in the power station.

Can a solar energy storage power station generate power 24 hours non-stop?

(Xinhua) LANZHOU, July 19 (Xinhua) -- In Guazhou County of northwest China's Gansu Province, a solar thermal energy storage power station can generate power for 24 hours non-stop. Its main project has begun commissioning and will be put into operation by the end of this year, according to the China Three Gorges Corporation.

What is a solar turbine?

Solar turbines, as opposed to conventional photovoltaic panels, utilize concentrated solar power (CSP) to power turbine systems, offering a scalable method for generating electricity.

What is pumped storage power plant?

The pumped storage power plant used for compensation of the variation of the output energy from the PV and wind power plants by discharging water from the upper reservoir, which is previously pumped in the case of surplus energy from PV and wind turbine power plants.

## Turbine Energy Storage solar Power Station
