

# **Two 200W solar panels in series**

## Overview

---

To wire your solar panels in series, simply link the positive MC4 connector of the first solar panel to the negative MC4 connector of the next one, and continue this pattern for the remaining panels. How to connect two solar panels in series?

To do this wiring, make two sets (pairs) of PV panels and connect them in series. This way, you will have two pairs of solar panels connected in series. Now, connect the two sets of series connected solar panels in parallel as shown in the following fig. Now, you are having four 12V, 10A solar panels connected in series-parallel configuration.

How much power does a 200W solar panel use?

In high-sun belts (AZ/NM/SoCal) summer PSH can exceed 6.5-7+, turning a single 200W panel into roughly ~1.0-1.1 kWh/day at 0.80 efficiency—and up to ~1.2 kWh/day on exceptionally good days with optimal tilt and minimal losses. If your MA numbers look tight for your goals, don't panic—there are levers.

Can a 12V solar panel be connected parallel?

Only the same rated solar panel can be connected in series, parallel or series parallel connection. A 12V solar panel can only be connected in (series, parallel or series-parallel) with another 12V solar panel. A 12V solar panel should not be connected (in series, parallel or series parallel) to a 6V or 24V solar panel.

Can solar panels be wired in series?

The lower the threshold voltage, the lower the dissipation of solar power on the diode. If we have two or more solar panels with the same voltage but with different current, it is NOT possible to wire them in series. Nonetheless it is possible to wire them in parallel.
