

UPS battery cabinet placement requirements

Overview

How do I set up an UPS battery room?

Open-rack battery rooms must be adjacent to the UPS room. Battery cabinets must be adjacent to the UPS equipment. Cable lengths from multiple cabinets should be kept as nearly identical as possible to prevent voltage drop variations. One cabinet should be able to hold at least one complete string of cells.

How close should a battery be to an ups?

As mentioned earlier, batteries should be as close as possible to the UPS. The reasons are twofold: Longer cable runs mean greater potential for damage and/or short circuit. Open-rack battery rooms must be adjacent to the UPS room. Battery cabinets must be adjacent to the UPS equipment.

Can UPS batteries be installed outside?

UPS batteries should never be installed outdoors where they can be exposed to the damaging effects of sunlight. IEEE 1635/ASHRAE 21 is a good engineering reference for designing properly ventilated battery rooms and cabinets. Lead-acid batteries contain substances that are not good for the environment in which we live.

Are ups and battery cabinets dangerous?

The UPS and/or battery cabinets might be configured to look like standard computer equipment racks. There are two primary hazards of concern: electrical and fire. Open rack batteries expose potentially lethal voltage to any person coming in contact with them.
