

# **Ultra-high efficiency energy storage containers for oil refineries**

## Overview

---

What is a crude & HFO storage tank?

The Crude & HFO Storage Tank from TEC Container Solutions provides high-capacity, insulated static storage for crude oil, heavy fuel oils (HFO), and other high-viscosity products. Built with a double-walled, fully bundled design, it ensures environmental protection while maintaining stable product temperatures even in harsh conditions.

What type of storage tank is used for crude oil?

Pressurized Storage Tanks: Used for storing volatile crude oil fractions (a group of hydrocarbons separated from the oil during fractional distillation) that require containment under pressure higher than atmospheric pressure.  
Open-Top Tanks: Less common for crude oil storage, these tanks are primarily used for temporary containment.

What are petroleum storage tanks?

Petroleum storage tanks are specialized tanks used to store crude oil and its refined products. The types of storage tanks for petroleum products PDF resources often classify these tanks based on their design and function, including: Crude Oil Storage Tanks: These large-volume tanks are designed to hold unrefined petroleum before processing.

Why should you choose TEC's crude oil & HFO storage tank?

With optional thermal fluid, steam, or direct fire heating integration, and modular ISO-framed mobility, it delivers a flexible, compliant solution for refineries, terminals, blending facilities, and remote energy sites worldwide.  
Why Choose TEC's Crude Oil & HFO Storage Tank?

Struggling with safe storage for heavy, viscous products?
