

Uninterruptible power supply network monitoring terminal

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device that provides backup power when the main power source fails. It is used to protect hardware such as computers, telecommunication equipment, or other electrical equipment where an unexpected power outage could cause business disruption or data loss.

What is a network UPS tool?

It is used to protect hardware such as computers, telecommunication equipment, or other electrical equipment where an unexpected power outage could cause business disruption or data loss. The Network UPS Tools (NUT) is a collection of programs that provide a common interface for monitoring and administering UPS hardware.

What is network UPS Tools (NUT)?

The primary goal of the Network UPS Tools (NUT) project is to provide support for Power Devices, such as Uninterruptible Power Supplies, Power Distribution Units, Automatic Transfer Switches, Power Supply Units and Solar Controllers.

What is ups monitoring?

UPS monitoring is the process of monitoring the different metrics of UPS devices in a network, including voltage, current, battery status, and charge, so they are always up, available, and working. Monitoring critical performance metrics is crucial for maintenance, uptime, and to upgrade your power system to handle extended outages.
