

Use external power supply as UPS

Overview

Can a portable power station be used in place of a ups?

You asked if a portable power station can be used in place of a UPS. Well, the answer depends on the capabilities of the power station you're planning to use. Like I said above, many portable power stations don't have the Battery Bypass feature that's essential for using a power station in place of a UPS.

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) protect sensitive electronics like desktop computers and external hard drives. Data centers worldwide rely on UPS systems to safeguard valuable consumer, government, and commercial data and prevent damage to costly servers, network drives, and storage infrastructure.

How does a ups work?

When plugged into an electrical outlet, a UPS uses a function called Battery Bypass to feed power directly from the outlet to the computer (or whatever device is plugged into it). In other words, the power coming in from the grid bypasses the battery completely to directly power the load device (s).

Why do you need an ups device?

The purpose of a UPS device isn't to keep gear running for extended periods of time. They are actually designed to serve as an always-ready short-term backup power source that keeps your computer gear powered up long enough for you to save any open files and perform a normal (i.e. safe) shutdown procedure when the power goes out.
