

Use home charging pile to charge the solar container battery at night

Overview

Should you charge solar batteries at night?

The simple answer involves charging solar batteries from the grid when electricity is cheap. And if you have an EV tariff that gives you access to several hours of low-price energy, charging solar storage batteries at night makes sound economic sense. Imagine you're running an energy-efficient home that has a heat pump and several rooms to heat.

Should I charge my solar panels with grid power?

So, when your electricity is at its cheapest and your battery storage for solar panels needs a little help, simply charge the battery with grid power. The energy you store will help to power your home at times of the day when electricity costs are at their highest.

Can a solar power battery charge from the mains?

Even if you have solar power battery storage, maximising it to ensure you're fully self-reliant is, at times, impossible. When you have a solar energy battery you can charge directly from the mains with grid electricity, however, you can top up when your electricity tariff is at its cheapest. And that's usually during the night with an EV tariff.

Should I charge my battery at night?

If you have a renewable energy system, such as solar panels, overnight charging can complement your energy strategy. By charging your battery at night, you ensure that it is full and ready to store solar energy during the day. This can maximise your use of clean energy and further reduce reliance on the grid.
