Overview

What is Photovoltaic Glass?

Unlike traditional solar panels that absorb visible light, photovoltaic glass converts primarily ultraviolet (UV) and infrared light into electricity, making it suitable for windows, facades and other transparent surfaces of buildings, vehicles and equipment.

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

What is a solar cell cover glass?

Our Solar Cell Cover Glasses offer a range of technical advantages when used for space or terrestrial applications such as photovoltaic systems and optical solar reflectors. Transmittance across the spectrum from UV-A to near-infrared is excellent, while low-wavelength UV radiation is effectively blocked.

Why do photovoltaics need solar glass?

Whether on Earth or in space, photovoltaics require technical solar glass for protection from harsh environments, as well as to sustain high transmittance in the visible spectrum of light up to near-infrared that increases the efficiency of the cell while shielding against harmful radiation.
