

What are the outdoor small signal base stations

Overview

How many types of base stations are there?

Macro cell, Micro cell, Pico cell and Femto cell are 4 types of base stations in wireless communication networks. Macrocell antennas must be properly mounted on ground-based masts, rooftops or other existing structures and at heights for an unhindered, clear view of the surroundings.

What is a small-cell base station (SBS) antenna?

To address the growing demand, 5G technology is being implemented at a larger scale. Small-cell Base Station (SBS) antennas are crucial for exploring the full potential of 5G networks by expanding the network in urban areas, densely populated regions, indoor environments, and low-coverage zones.

What is a base station?

Base stations are one of the widely used components in the field of wireless communication and networks. It is an access point or base point of a particular area for network accessibility. In this article, we will discuss the different types of base stations with their advantages and applications in the real world.

What is a micro base station?

It is usually set up in densely populated areas such as indoors, office buildings, shopping malls, subway stations, etc. to provide better signal coverage and capacity support. Micro base stations can enhance the quality and stability of wireless signals and provide higher data transmission speeds and lower latency.
