

# What is the maximum power of a 35Kw solar panel

## Overview

---

How big is a 35kW solar power system?

A 35kW system using 370W panels will require about 166.6 square meters of roof to be installed. Each 370W panel measures about 1.75m x 1m. 35kW solar power systems are mostly suitable for SMEs with medium energy needs. This size of solar power system is classed as "Commercial/Industrial".

How many square meters does a 35kW solar system require?

This is because as panels get large (in Watts) they also become a little bit more efficient. A 35kW system using 370W panels will require about 166.6 square meters of roof to be installed. Each 370W panel measures about 1.75m x 1m. 35kW solar power systems are mostly suitable for SMEs with medium energy needs.

Do I need a 35kW Solar System?

Whether or not you need a 35kW solar system will depend on many things. If you are a Commercial/Industrial customer and you use between 139.6kWhs and 211.4kWhs then a 35kW solar system could be a good choice to help reduce power bill costs. Solar Proof Quotes offer a quick and easy way to get 35kW solar system quotes.

How do you calculate the maximum power of a photovoltaic system?

The first step in calculating the maximum power of a photovoltaic system is to determine the specifications of the solar panels being used, including the Maximum Power Point (MPP), which is the voltage and current. The annual energy output of a photovoltaic solar installation is calculated by dividing the maximum solar panel power by the area.
