

# What kind of battery is used for power station energy storage

## Overview

---

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

Which batteries are used in energy storage?

Although recent deployments of BESS have been dominated by lithium-ion batteries, legacy battery technologies such as lead-acid, flow batteries and high-temperature batteries continue to be used in energy storage.

What is a battery energy storage system?

A battery energy storage system (BESS) is a device that allows electricity from the grid or renewable energy sources to be stored and used later. BESS can be connected to the electricity grid or directly to homes and businesses.

Why is battery energy storage important?

Battery energy storage is becoming increasingly important to the functioning of a stable electricity grid. As of 2023, the UK had installed 4.7GW / 5.8GWh of battery energy storage systems, with significant additional capacity in the pipeline. Lithium-ion batteries are the technology of choice for short duration energy storage.
