

# **Wind power restoration status of North African solar container communication stations**

## Overview

---

Is wind power a viable resource for Africa?

While exact estimates differ, all datasets recognized significant potential for wind power on the continent, confirming wind power as an abundant and well distributed resource that can contribute significantly to power development on the African continent.

What is the technical potential of wind power in Africa?

A total technical potential of 3.38 TW of wind power was confirmed for Africa. Screening extracted subset of wind power developments realistically Box 1. On and offshore wind power.

Why is wind energy under-utilized in Africa?

Though endowed with wind resources as well as strong solar radiation spreading across the continent, wind energy in Africa is under-utilized . Despite the worldwide expansion, Africa only contributes 1% of the world's installed wind capacity .

How to implement wind energy policies in Africa?

Implementing wind energy policies in Africa requires adjusting policies to suit different systems of government. Currently, some countries allow 'essential services' to operate under public-private partnerships while others place all energy institutions under the full control of the government.
